grey labs

Custom business systems · Philippines

your business, running on software built for it.

Grey Labs builds custom CRM, warehouse and HR systems for Philippine businesses, designed around how you already work.

PROJECT SHOWCASE · 2026

sound familiar?

01

Excel files everywhere

Five versions of the same sheet, and nobody knows which one is right.

02

Updates live in group chats

Where is that project? Ask around, scroll up, hope someone remembers.

03

Stock that doesn’t add up

Materials go out to sites and never quite come back on paper.

04

Payroll eats the week

Time sheets, rounding rules and deductions, all computed by hand every cutoff.

selected work.

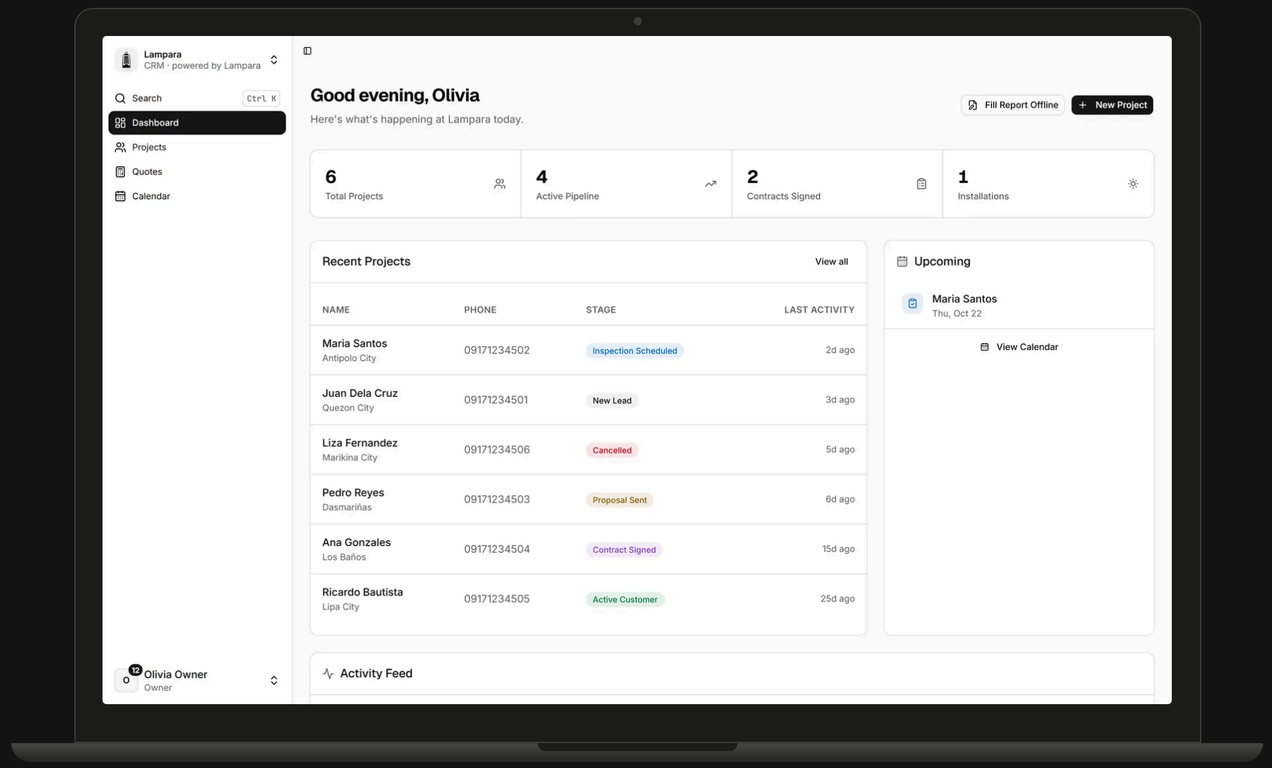

Lampara Electrical Installation Services, a Philippine solar installer, ran sales, stock and staff on paper and spreadsheets. Now it all runs in one system its whole team uses every day, plus a website that brings new customers in.

01 **Inquiry to after-sales**

Inquiry to after-sales

Lampara sells and installs solar systems across Metro Manila and CALABARZON. Every job used to live in notebooks, Excel quotes and group chats. I built one system that follows each customer from the first inquiry to after-sales service.

CLIENT

Lampara Electrical Installation Services

INDUSTRY

Solar installation, Philippines

PLATFORMS

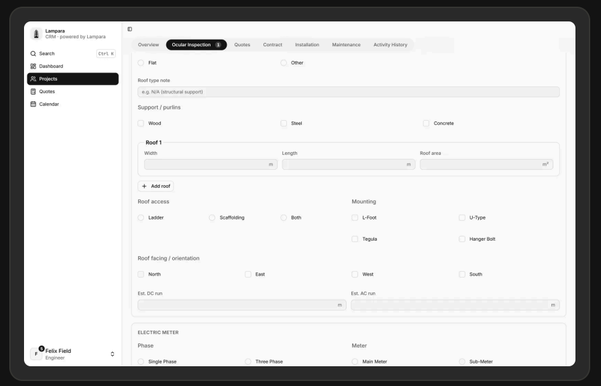

Web and Android app

USED BY

Owner, office staff, field technicians

inquiry to after-sales, in four screens.

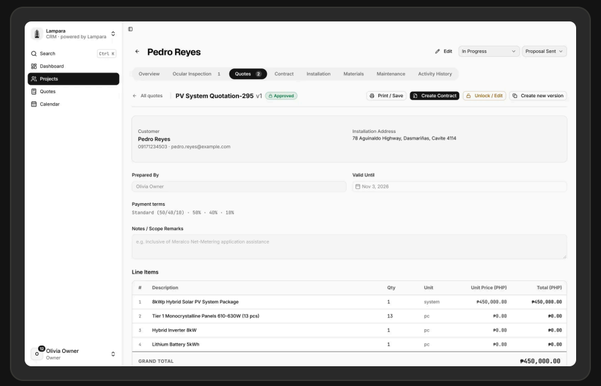

Owner · Admin · Field technician

01

The paper inspection form, now on a phone

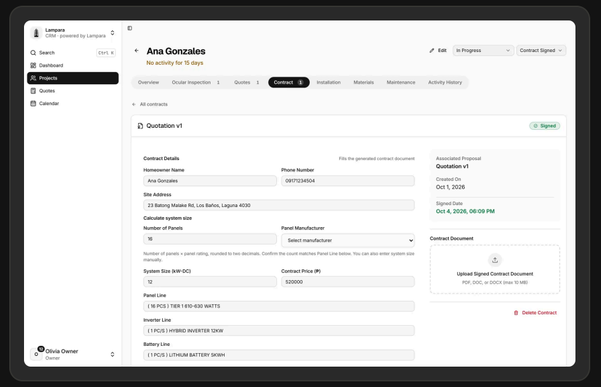

The site inspection report mirrors the printed form the surveyors already used: roof, mounting, electrical, photos per section.

02

Quotes built from packages

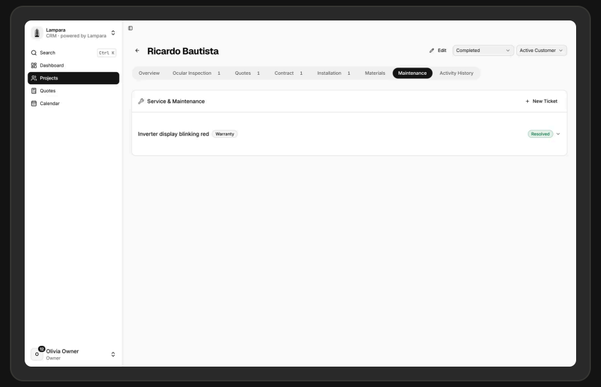

Start from a saved package, adjust items and prices, and keep every version. Approving a quote locks its numbers.

03

Contracts generated from the approved quote

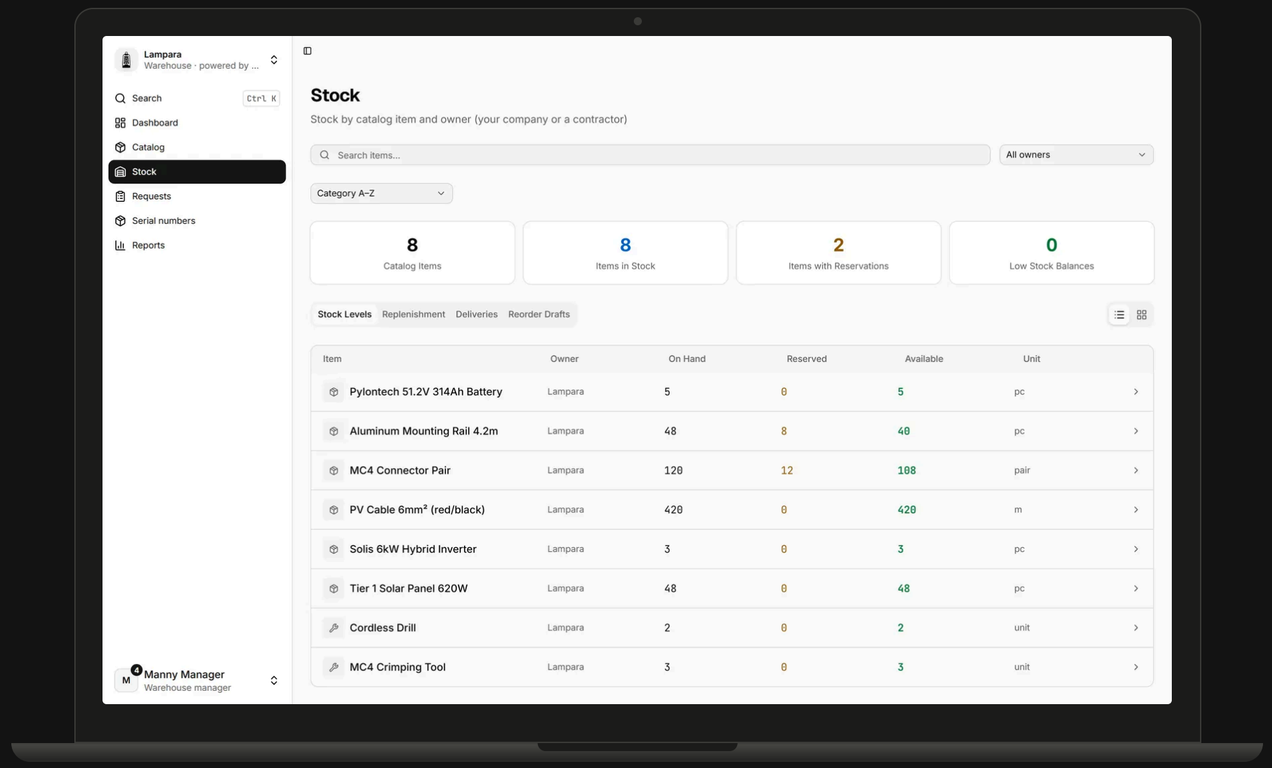

Contract details, materials and payment terms come straight from the approved quote and print as a PDF. The signed copy is uploaded back.

04

After-sales and warranty

Every customer keeps a service history, with warranty status on each ticket.

Every item, accounted for

Lampara's warehouse supplies every installation: panels, inverters, batteries, cables and tools. Materials went out to sites and did not always come back on paper. This module puts every item, request and release on record.

Warehouse and inventory

PLATFORMS

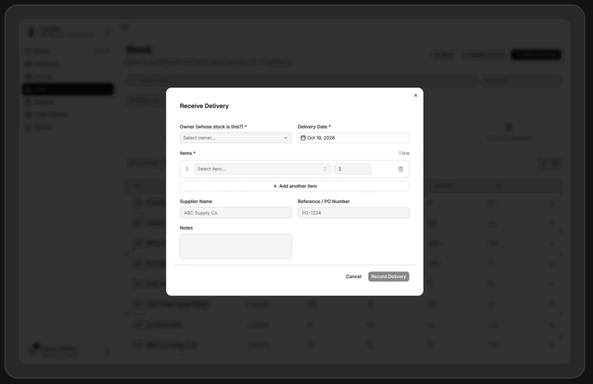

Web and Android app

USED BY

Manager, warehouse staff, engineers, admin

every item, accounted for, in four screens.

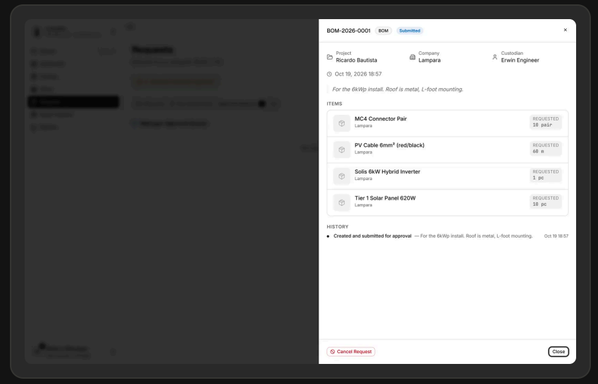

Manager · Warehouse staff · Engineer

01

Receive deliveries

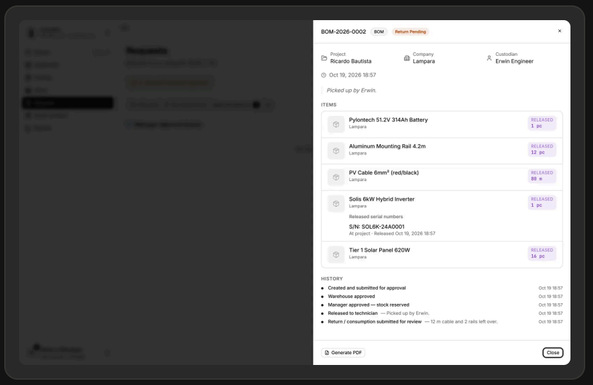

Log what arrived, from which supplier, against which PO, in one step.

02

Approve before anything leaves

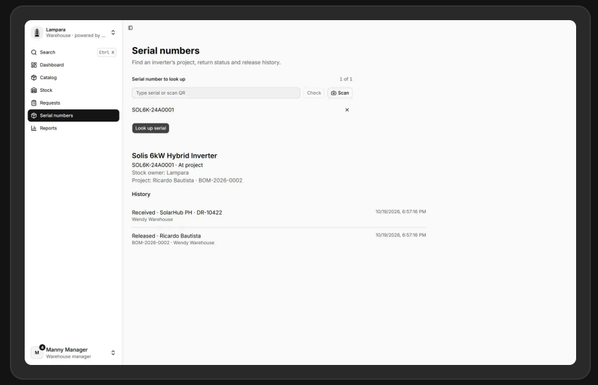

A manager approves each request. Approved items are reserved, so two projects cannot claim the same stock.

03

Releases and returns, on record

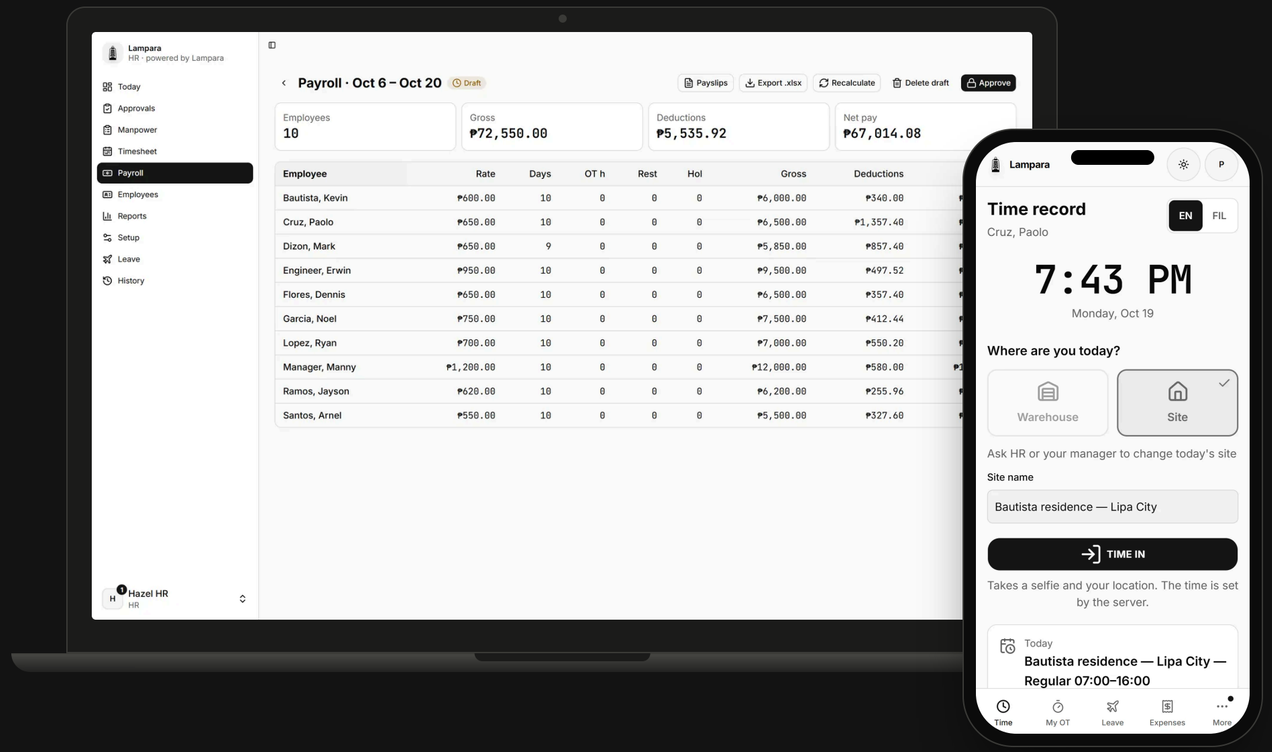

Every release names who picked it up. Serial numbers are captured on release, and returns are reviewed before going back into stock.

04

Every inverter serial, traceable

Look up any serial number: when it was received, and which project it was released to.

Payroll on your rules

Lampara's crews work across many sites each day. Attendance arrived by message, and payroll was computed by hand from HR's spreadsheet every cutoff. This module takes attendance from phones and computes payroll the way HR already did.

USED BY

HR, managers, crew leaders, employees

payroll on your rules, in four screens.

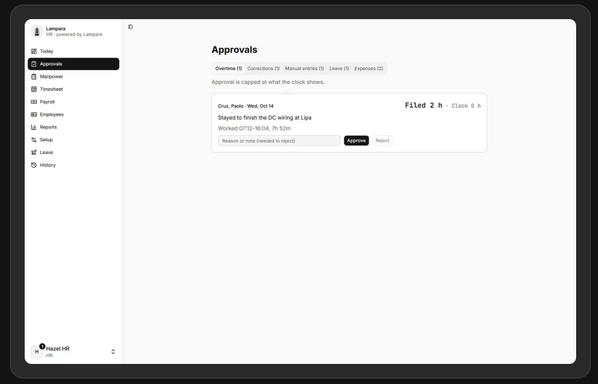

HR · Manager · Crew leader · Employee

01

Today, at a glance

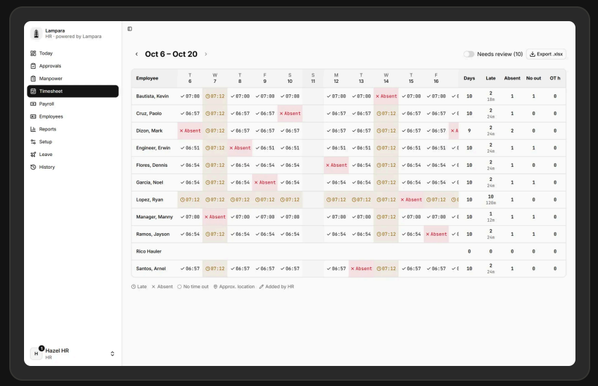

Who is in, who is late, and who has not timed out yet, grouped by today's site plan.

02

One queue for approvals

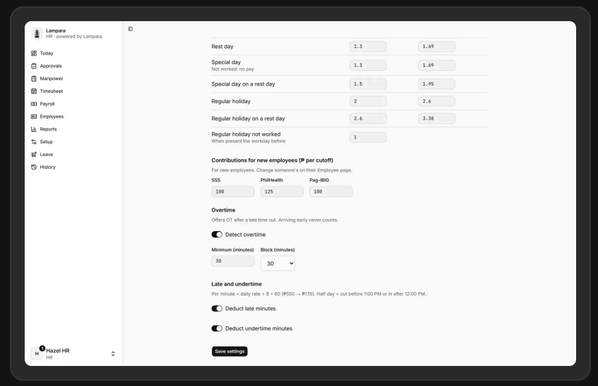

Overtime, time corrections, manual entries, leave and expenses, each approved or rejected with a reason.

03

Timesheet per cutoff

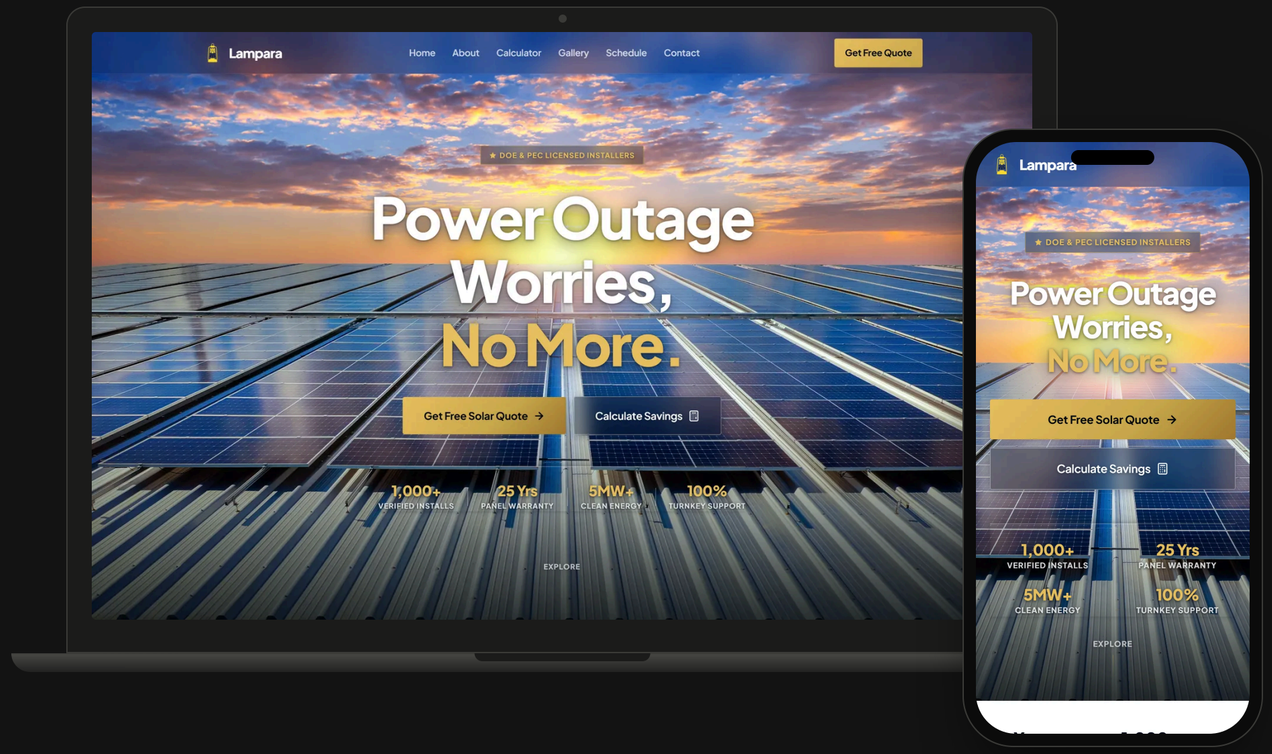

A grid of every employee and every day in the cutoff, with lates, absences and missing time-outs marked.

04

The pay rules, as settings

Rest day, special and regular holiday multipliers, contributions, and late and undertime rules, taken from HR's own sheet.

A storefront that books installs

lamparaeis.com is Lampara's public website. It shows real installations, estimates savings from a customer's electric bill, and lets them request a quote or book an installation date.

a storefront that books installs, in four screens.

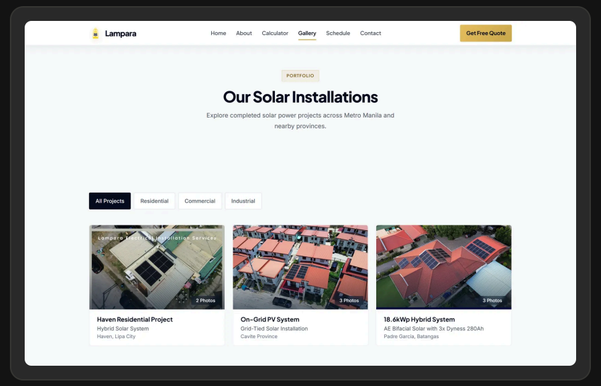

Homeowners · Businesses · Lampara team

01

Savings calculator

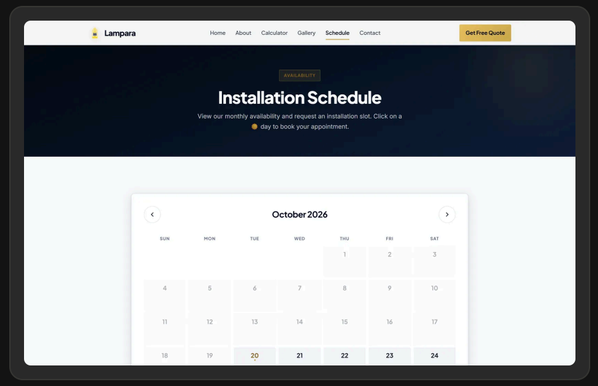

Enter a monthly electric bill and see the recommended system size, monthly savings and payback, with the assumptions stated plainly.

02

Real installations

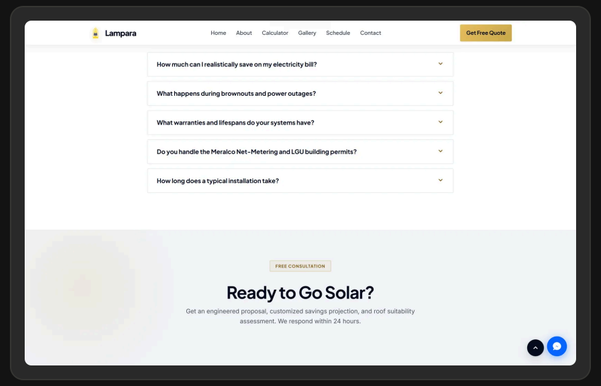

A portfolio of completed projects, filterable by residential, commercial and industrial, with photos for each.

03

Book an installation date

Customers see monthly availability and request a slot directly.

04

Answers before the first message

Common questions on savings, brownouts, warranties and permits, then a free consultation request.

software that fits.

If your team runs it on paper or Excel, it can be a system.

01 **Sales and project systems**

For solar, construction, electrical, aircon and fit-out businesses: lead and job pipeline, site reports on mobile, quotes, contracts, service and warranty.

02 **Warehouse and inventory**

For hardware, supplies, trading and logistics: inventory and counts, requests and approvals, releases and returns, serial and batch tracking.

03 **HR, attendance and payroll**

For any growing company: employee records, attendance and DTR, payroll computed on your own rules, payslips and reports.

04 **Websites and landing pages**

A site that turns visitors into inquiries: your real projects, a quote or booking form, and an admin page so your team keeps it current.

05 **Monthly care**

Hosting, fixes, support and small improvements every month, as your business changes.

four steps, no surprises.

01

Map your process

We sit with your team and collect the forms, sheets and steps you use today.

02

Build in weeks

You see working screens early and often, not one big reveal at the end.

03

Test safely

Every change is tried on a test copy first, so your live data is never at risk.

04

Launch and grow

Staff training, then ongoing updates as your business changes.

Custom business systems.
Built around how you work.

THANK YOU FOR YOUR TIME
